

ABSTRACT

1 A secondary battery includes an electrode unit having a first electrode plate, a second
2 electrode plate, a separator interposed therebetween, and first and second electrode tabs
3 respectively extending from the first and second electrode plates, a can adapted to accommodate
4 the electrode unit and an electrolytic solution, and a cap plate adapted to seal the can and having
5 an electrolytic solution inlet, wherein the electrolytic solution inlet has an area on one surface of
6 the cap plate different from that on another surface of the cap plate.
